SCIENTIFIC INTERESTS

I am interested in patterns and processes in animal biodiversity; I analyse the patterns surveying what is out in the field using different approaches from morphology, genetics, and genomics, and use statistical and experimental approaches to infer the processes that originate and maintain biological diversity. My main research fields include speciation and macroecology, using as a test case microscopic invertebrates, mostly rotifers.

SUMMARY

Present position: Researcher

Number of publications: 149

- 110 papers in ISI Web of Science, 22 in other peer reviewed journals and proceedings series

- 2 books, 7 book chapters, 1 book review, 7 papers of scientific divulgation

Abstracts from meetings: 84

Editorial board membership: 5 (Biogeographia, European Zoological Journal, Hydrobiologia, Journal of Limnology, PLoS ONE)

Guest editor for special issues in international ISI journals: 4

Manuscript revision: for 93 journals

Invited seminars: 48, in 16 countries

Invited speaker in international conferences: 8, in 5 countries

Invited speaker in international workshops: 6, in 4 countries

Member of the CITES Italian Scientific Committee

Member of PhD committees: 12, in 5 countries

Indexes evaluating scientific production (from Google Scholar, 3rd September 2017):

- total number of citations = 2698

- Hirsch's H index = 28

- i10 index = 77

- Q1 ISI papers: 44 out of 110
